

The USD 449 terminal server can be accessed via any computer running Internet explorer 5.0 or higher with an internet connection. **Please make sure that if you have a firewall running that you open TCP ports 3389 and 7000.**

### First time setup - READ THIS!

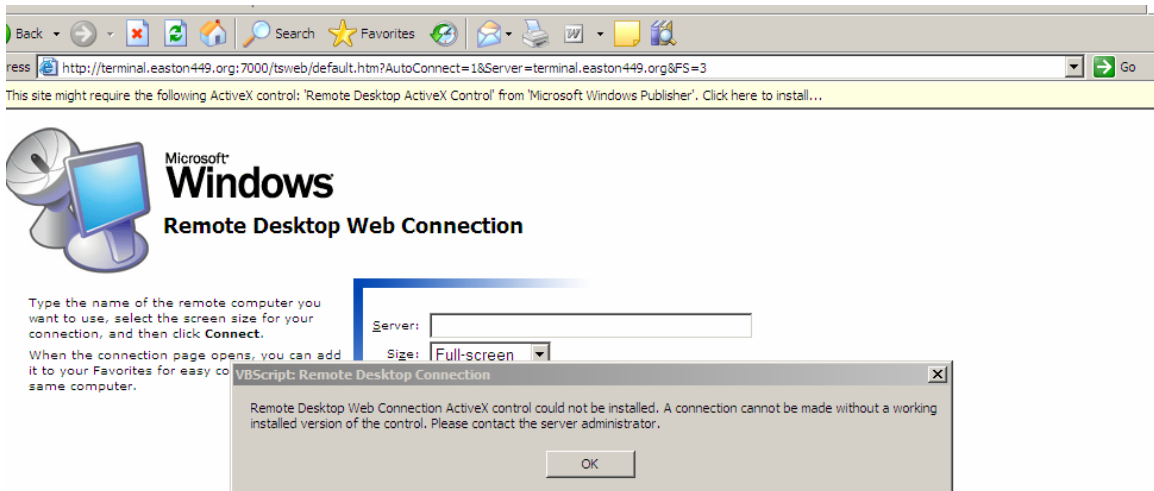

Depending on your version of Windows you may get some errors/warnings.

**On systems that do not have XP service pack 2 there will be one message that pops up:**

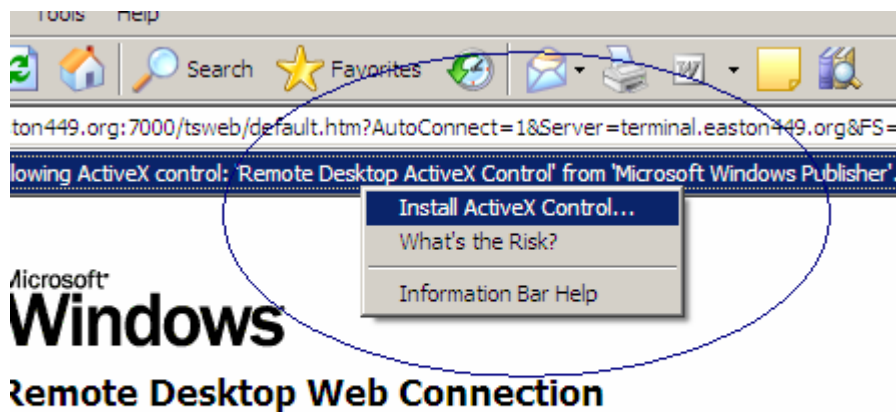

Once the "Yes" button is pressed the terminal window should come up.

**On pre XP SP2 systems with pop up blocker enabled there will be some errors.**

1. Press Ok on the VBScript error.
2. Click OK on the "invalid server name" error.

3. Click the popup security bar and choose "install ActiveX control"
4. Click install on the Internet Explorer security warning window.

Once you have the ActiveX control installed it will go right to the terminal session on following connections.
